PROFESSIONAL SUMMARY

AI Professional & Data Scientist specializing in Generative AI, Copilot Studio, and Agentic Process Automation. Architect of end-to-end AI solutions—including LangGraph-based LLM agents and RAG pipelines—designed to automate enterprise procurement and drive high-fidelity business intelligence.

SKILLS SUMMARY

Programming Languages : Python, SQL, PHP
AI & Machine Learning : Generative AI, RAG, LangGraph, Deep Learning (CNN, GAN, Transformer, Diffusion architectures), Object Detection, Image Restoration, Agentic AI, PyTorch, Tensorflow
Tools & Platforms : Streamlit, MySQL, OpenCV, Fairlearn, YOLO, AWS, Copilot Studio, Postgres

EXPERIENCE

- Novartis India Pvt Ltd** Hyderabad, India
Data Scientist July 2025 - Present
 - Agentic Process Automation:** Spearheaded the deployment of enterprise-grade LLM agents using LangGraph, automating complex organizational workflows and reducing manual processing time by 30% by leveraging multi-agent orchestration.
 - RAG Architectures:** Architected high-fidelity Retrieval-Augmented Generation (RAG) systems to extract insights from 20000+ unstructured datasets, improving information retrieval accuracy and decision-making speed.
 - Data Engineering & Scalability:** Engineered end-to-end, scalable ETL pipelines that streamlined data ingestion architectures, ensuring 99% data reliability for downstream Generative AI applications.
 - Statistical Strategy:** Transformed complex datasets into real-time interactive dashboards using Python and SQL, enabling stakeholders to drive strategic decisions based on deep exploratory data analysis (EDA).

EDUCATION

- Master of Technology in Artificial Intelligence and Decision Science** Manipal, India
Manipal Institute of Technology; GPA: 8.7 2024 - 2026
- Bachelor of Engineering in Computer Science Engineering** Udupi, India
Visvesvaraya Technological University; GPA: 9.32 2020 - 2024
Gold Medalist: (Highest Academic Achiever in B.E. cohort)

PROJECTS

- Agentic Procurement Automation (LangGraph, RAG, Python, SQL, Databricks, RPA, AWS):** Developed a multi-agent orchestration system for contract analysis and vendor risk assessment. Built dynamic LangGraph workflows to automate routine clauses and intelligent RPA bots for unstructured data processing. Deployed a high-performance RAG pipeline on Databricks for historical context, transitioning the tool from prototype to production-ready enterprise scale using Bitbucket CI/CD.
- Object Detection for the Visually Impaired (Python, YOLOv5, Faster R-CNN, gTTS, LiDAR):** Developed a real-time navigation assistant for independent mobility, integrating deep learning models with LiDAR sensor data. Engineered a hardware-software interface to provide spatial awareness through gTTS-driven audio cues, earning 2nd Place in the B.E. Final Year Project Exhibition for its impact on accessible technology.
- Music Genre Prediction and Sentiment Analysis (Python, DistilHuBERT, VADER, wav2vec2):** Developed a multi-modal analysis tool to classify song genres and analyze listener engagement from YouTube URLs. Integrated DistilHuBERT and wav2vec2 for audio classification with VADER for large-scale sentiment analysis of audience comments, automating the process of mapping musical styles to public reception.

PUBLICATIONS & ACHIEVEMENTS

- Publications:** Image restoration using deep learning techniques: A comprehensive review: ICT Express (Elsevier), 2026. DOI: [10.1016/j.ict.2026.03.002](https://doi.org/10.1016/j.ict.2026.03.002)
- GATE 2024:** Cleared Graduate Aptitude Test in Engineering with an All India Rank of 8399.
- Hackathons:** 1st Runner-Up in State Level Hackathon (YouTube video question generator); 1st Place in WebCraft Challenge (Flask web app for college fest).
- Certifications:** Google Data Analytics Specialization, AWS Fundamentals, Transformer & BERT Models (Google Cloud), Prompt Design in Vertex AI (Google Cloud), Responsible AI for Developers: Fairness & Bias (Google Cloud).
